Summary

Concrete Grain Silo modelled in 1:22.5 scale for use on G-Scale train layouts, particularly with LGB.

Tags: scale g train silo gscale grain

I printed mine with PETG at 0.2mm layers for the outside pieces and 0.1mm layers for the top cap and small detail pieces (had a couple of layer shifts on mine, printed again for a friend and it came out great). Printed on my Mk4. I originally left the hole in the bottom for anyone who wants to fix this into their layout with a stake or something, I never did end up making a 3d printable spike for it, but I could if there is any interest.

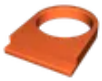

You will need:

- 7 Pipe Clamps
- 2 Silo Middle
- 1 of every other piece.
