## Summary

Parts for undercarriage of model train freight cars. For resin printing.

Toys & Games > Vehicles

Tags: h0 modelrailway modelrailroad modeltrains hoscale h0scale h0trains 187scale

This is a collection of undercarriage parts for freight cars. In particular, this is modelled after Soviet/Russian freight car components. The models are in 1/87 scale, but can be scaled to other scales.

Models are designed for photopolymer resin printing. Components of brake system have holes of 0.5mm for metal wire imitating hoses and rods.

The files are available in STL, most are available in STEP for embedding into CAD designs (in the ZIP archive). There is a PrusaSlicer .3mf file with supports.

Contents:

- SA-3 Coupler socket
- Uncoupler lever (long)
- Uncoupler lever (short)

- Brake wheel (3 spokes)
- Brake wheel (6 spokes)
- Brake wheel (6 spokes and mounting box)
- Brake wheel drive
- Brake wheel drive with wheel shaft
- Side ladder
- Front/rear steps
- Brake cylinder
- Brake cylinder with long arm
- Brake distributor
- Airtank
