Tags: modeltrain modelrailroad hoscale

A useful HO 1:87 scale tool designed to keep the same distance between the centers of adjacent and parallel tracks. It can be used with both straight and curved track sections. This track tool keeps flexible track in the location desired temporarily before nailing it down permanently.

Print out and build at least two of them to install track. The tool uses a 3M bolt, washer and brass insert to secure the sliding section. Version shown is made with PLA with a 0.02 layer height and 25% infill. No supports are required.
