This is a model of a small turn-table that is compatible with the Märklin / Trix C-Track system.

It is meant to model the small turntables you would find connecting industries or in old stations, to shunt small two axle wagons between two tracks. Because of this, it table is designed so that two of them will just fit the standard spacing in the C-Track geometry.

This is a remix from existing C-track models: https://www.thingiverse.com/thing:4862263
