Tags: bridge train nscale viaduct turnout

A turnout viaduct for my N-Scale train viaduct system. This goes with the brackets and other components my printed viaduct system.

This turnout accommodates 4 mainline tracks with Kato's track system and allows for offramps from the viaduct. In the photos, this part is the top turnout. There's another turnout which is mirrored and has passthroughs for wiring.

Print upright. This was designed to be made on a tall printer with no supports.

The rest of the viaduct parts are here: https://www.printables.com/social/261772-alex-mackinnon/collections/336869
