This is my version of a car to hold the IoTTStick with purplehat sensor board in N scale. This car lowers the center of gravity approximately 3.5 mm below the truck bolsters compared to the version I downloaded. Designed to fit Microtrains Bettendorf trucks with medium extension couplers 003 02 022 (1003). You will need to drill out the hole to use their press fit pins. I used a .073" drill.

I printed my car upside down with supports to give the best surface for the truck bolsters to ride on.

### Print Settings

**Printer Brand:**

Prusa

**Printer:**

i3 MK2.5

**Rafts:**

No

**Supports:**

Yes

**Resolution:**

0.15mm layer 4 perimeters

**Infill:**

80%

**Filament:** any PLA any
