Summary

I have designed a roundabout here. This is intended for a model railway. Perhaps someone else can also make use of it.

Tags: schild roundabout

I printed it with a layer thickness of 0.08mm on the Bambu Lab. This print took me about 5 hours by 100% speed. All the small boxes did not blend together during the printing, and the roundabout turned out very well. The outer diameter measures 203.5 mm.
