Print instructions

The model is made for 0.15mm layer. Print it upside down without any supports. It is also possible to cut the model and use a different base of the tree (some models can be downloaded here: https://

www.prusaprinters.org/prints/5337-old-trees).
To have the the nicest treetop, go to the print settings/advanced and set the following values to 0.4:
extrusion width
first layer extrusion width
perimeter extrusion width
external perimeter extrusion width

When finished, carefully remove the skirt using a razor knife, then heat the tree to adjust the branches.
