Hello,

this is a model of a HO scale railway wagon, that can make 3 different wagons:

1. Print just the bottom part and you'll have a container platform;
2. Print the bottom part, add some decking and you'll have a platform wagon.
3. Print all parts and assemble it - you'll get a car carrier wagon.

I doqnloaded the rendering model and made some changes to make it 3D printable, as well as split some parts to be able to print it eithr FDM or SLA.

I use this kind of wheels: https://www.aliexpress.com/item/32837729114.html?spm=a2g0s.9042311.0.0.27424c4diQNhS9

but you could print your own, as it is not required to be metal.
